

## Popup Blocker Exception Guide

### Safari

**Safari does not allow you to add exceptions to the pop-up blocker. You can only have the blocker ON or OFF.**

When your blocker is turned on, there is no obvious alert that a pop-up has been blocked. So you'll need to go into Safari's settings to turn off the blocker.

1. Open **Safari**.
2. In the top left of the window, click **Safari**.
3. In the drop-down menu, click **Preferences...**

4. Click the **Security** tab found on the top row.

5. Under **Web Content**, uncheck Block pop-up windows.
